

ED3KH, MV compensation reactor

50 kvar up to 1 Mvar

Approvals

Technical data

Power of compensation	50-1000 kvar
Rated voltage	3-20 kV
Rated frequency	50 Hz, 60 Hz
Cooling	AN, AF – air natural or air forced
	40°C – land design
Ambient temperature	45°C – maritime design
	>50°C – special design
Insulation class	F (155°C), H (180°C)
Winding material	aluminium, copper
Optional equipment	Temperature sensors, wheels, fans, vibro insulators
Mounting	Standing, vertical
Degree of protection	IP00
Standards compatibility	PN-EN 60076-1 PN-EN 60076-6

Function

Increased capacitive power consumption is observed in broad cable grids which are typical for wind farms and mining industry. Uncompensated reactive power in the system leads to many negative effects:

- Extra fees for power factor overdrawn
- Additional power losses in transmission lines and transformers
- System instability due to voltage increase when grid has capacitive character

ED3KH compensation reactors are used to keep inductive character of a grid. Inductive power of a reactor reduces capacitive power, ensuring that grid operates within a proper Q/P coefficient range.

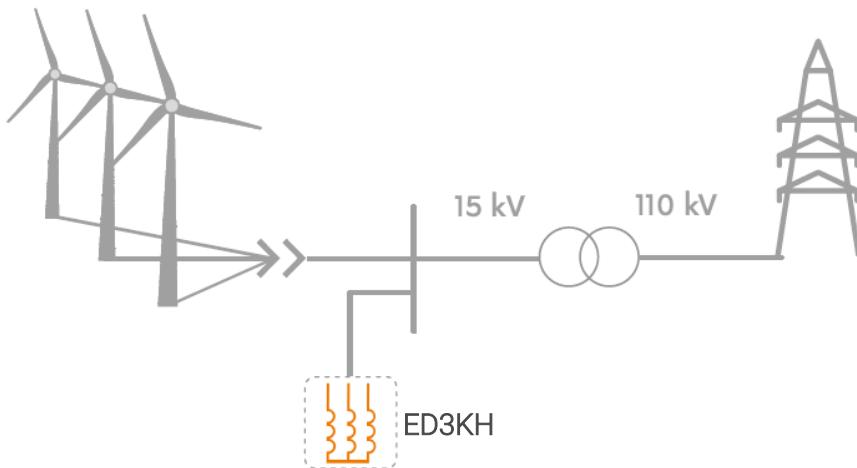

Benefits

- No fees for capacitive power
- Stable, inductive power factor
- Reduction of active losses
- Release of grid capacity thanks to reduction of effective value of the current

Application

- Reactive power compensation systems
- Onshore & offshore wind power plants
- Compensation of broad cable grids
- Mining industry

Typical application schematic

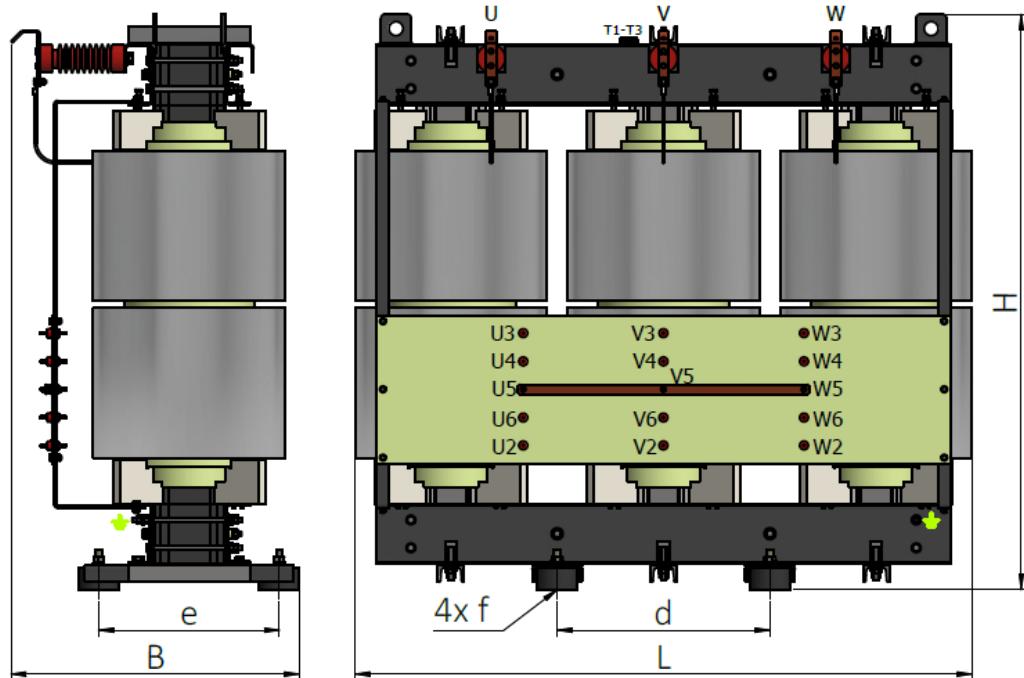

Dimensions

The table consists of exemplary power sizes of the compensation reactors. Specified dimensions are available for request.

No.	Type	L	B	H	d	e	f
		[mm]	[mm]	[mm]	[mm]	[mm]	[mm]
1	ED3KH-150kvar±2x2,5% 15750V 5,5A AL	1180	620	1220	410	330	M12
2	ED3KH-300kvar±2x2,5% 15750V 11,0A AL	1360	650	1270	470	350	M12
3	ED3KH-350kvar±2x2,5% 15750V 12,8A AL	1370	650	1320	470	350	M12
4	ED3KH-600kvar±2x2,5% 15750V 22,0A AL	1540	720	1450	530	450	M16
5	ED3KH-800kvar±2x2,5% 15750V 29,3A AL	1580	740	1530	540	450	M16

Drawings

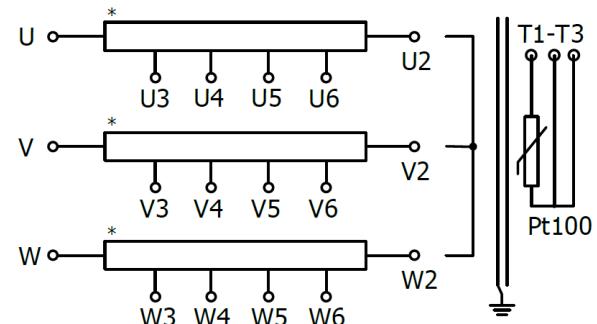

Sample technical data

Dane techniczne	
Power	600 kvar $\pm 2 \times 2,5\%$
Rated voltage	15750 V
Inductance	1316mH $\pm 2 \times 2,5\%$
Rated current	22 A
Insulation class	T40F
Type of duty	S1
Degree of protection	IP00
Cooling	AN
Frequency	50 Hz
Insulation level	LI/AC 95/38 kV
Material of winding	Al
Material of terminals	Cu

Wiring diagram

Wiring			
Q (U=15750 V)	Inductance	Input terminals	Star point connection
600 kvar +5%	L _n -5%	U, V, W	U3 - V3 - W3
600 kvar +2,5%	L _n -2,5%	U, V, W	U4 - V4 - W4
600 kvar	L _n	U, V, W	U5 - V5 - W5
600 kvar -2,5%	L _n +2,5%	U, V, W	U6 - V6 - W6
600 kvar -5%	L _n +5%	U, V, W	U2 - V2 - W2

Contactless temperature measurement

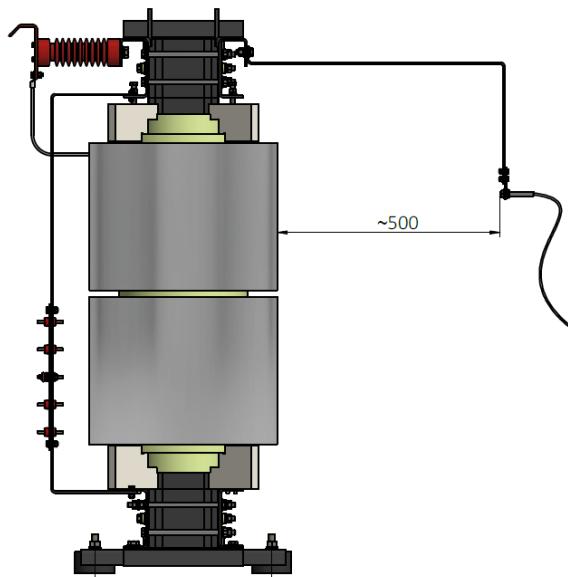

ED3KH reactor can be equipped with contactless temperature measurement system based on pyrometric sensor. Sensor and transmitter are mounted to the special pole or independent construction (wall, fence) in appropriate distance.

Parts of the system:

- Pyrometric sensor with transmitter
- Apar AR600 temperature regulator
- Connection cable

Minimum mounting distance between sensor and reactor is 0,5 m.

Pyrometric sensor mounting

Type code

E	D	3	K	H	150kvar±2x2,5%	15750V	5264mH±2x2,5%	5,5A	AL	T40F
Manufacturer symbol	Instrument type	Number of phases		Application type	Power of compensation	Rated voltage	Rated inductance	Rated current	Material of windings Blank if copper	Insulation class

Special execution

Products with parameters exceeding the catalogue card can be made upon prior contact.
